DREER'S SELECT HARDY PERENNIAL PLANTS

A VIEW IN OUR NURSERY, WHERE WE GROW HARDY PERENNIAL PLANTS BY THE ACRE.

OF all the plants that are cultivated for purely ornamental purposes there are none which have made such rapid strides in public favor as the **Old-fashioned Hardy Garden Flowers**, the inhabitants of the perennial garden. Their popularity is not at all surprising when we consider the many varied and pleasant changes which take place throughout the entire growing season in a well-arranged hardy border, in which every week—yes, every day—brings forth something fresh and new to interest and delight even the most critical. Beginning in April, the early-flowering varieties open their flowers often before the snow has entirely disappeared, and continue, with constant changing variety, throughout the summer until late in the fall, when only severe freezing weather will stop such persistent late-blooming kinds as Japanese Anemones, Pompon Chrysanthemums, Gaillardias, Gentians, Tritomas, etc.

Twenty years ago there were very few Hardy Perennial Borders outside of some large establishments where one or more professional gardeners were employed, who were familiar with the beauties of the hardy borders as found in almost every garden on the other side of the Atlantic, and who knew how to plan, and plant, and care for them. But a great change has taken place in this country within the last ten years, and there is now a steady and growing interest in this class of plants, and to-day almost everyone who is fortunate enough to have even a small garden devotes at least a part of it to hardy plants.

This change has, in a measure, been created by the many books on Gardening published in recent years, almost every one of which included a chapter or more on the hardy border, while some of them were devoted exclusively to hardy plants. The *Horticultural Press* has also been a great factor in stimulating interest in hardy plants. Unfortunately, while nearly all of the books and magazine articles give glowing descriptions of the delights of the Hardy Border and describe in detail many of the plants, none, as far as we know, give any drawings or plans showing how such a border should be made, or showing the proper location for the various plants in same. The usual excuse for this omission was that each garden demanded special treatment, and that no plan or set of plans could be used for any great number of places, and while this is in some cases true, we feel sure that the several plans which we have had prepared by a practical Landscape Artist, and which embody a great many of our own ideas, and which are reproduced on pages 8 and 9 of this book, will enable many amateurs to undertake the making of a hardy border who have until now been deterred from doing so by not knowing how to go about it.

The plants which we have selected to fill the various sections in the borders illustrated are the kinds that always do well and are most likely to give satisfactory results. Some planters may prefer to make their own selection, and we like to encourage this, as it gives to every border a touch of individuality, and to make this easy we give on pages 2 to 7 and 11 to 17 a complete alphabetical list of the hardy plants we offer this season, together with their color, average height of growth, time of flowering, and whether suited for a sunny or shady location. This list should make it comparatively easy, even for a novice, to make a selection to fill a bed of any size or shape without making a serious blunder.

We strongly recommend that all hardy borders should have a few clumps of spring-flowering bulbs interspersed along the front, including Snowdrops, Scillas, Chionodoxas, Crocus, Narcissus, Cottage Garden Tulips, Spanish Iris, etc., etc. These should be planted from September to November, and will greatly add to the interest of the border during the early spring months. We also suggest the putting of a few clusters of Annuals here and there throughout the border to add color during the hot summer months. For this purpose there is nothing better than Marigolds, Gaillardias, Zinnias, Antirrhinums, etc., etc., a few seeds of which can be sown during May in the spaces where they are wanted to bloom.

THE MAKING AND CARE OF AN OLD-FASHIONED HARDY BORDER.

Frequent are the discussions and many are the ideas concerning their cultivation and the best method of arranging them in the garden. In arranging hardy flowers one should never forget the ways of Nature, choosing the flowers she uses in the positions she thinks most suitable, while endeavoring to conceal stiffness of arrangement by a careful study of her plans and the judicious use of the beautiful hardy plants at our disposal.

Situation.—There is no class of plants which lend themselves to such varied assortment of climatic or soil conditions, but the most effective position for Hardy Perennial plants in general is a good open border, backed by a hedge, a fence or trellis covered with Rambling Roses or any other hardy climbing vines, while some of the taller-growing sorts, such as Hollyhocks, Sunflowers, Rudbeckias, Boltonias, Bocconias, etc., are also very attractive when planted throughout a shrubby border, their showy flowers forming a bright contrast with the foliage of the shrubs throughout the summer and fall, when few of the latter are in bloom.

Soil and Planting.—Cultivation is of the simplest, beginning with any good garden soil as a foundation, which may be enriched with such fertilizers as well-decomposed manure, bone-meal, or sheep manure deeply dug and well pulverized. The best time to plant hardy plants is just when they are emerging into life after their season's rest, when the weather is favorable and the soil in condition, or they may be set out in the autumn. Above all things avoid wet planting. Do not make the common mistake of overcrowding; give each plant sufficient room to allow it to develop to its full size. The nearest approach to a rule which may be followed in planting being to set out plants which grow to a height of 2 feet or less 12 inches apart, and all others space equal to one-half their height when developed. For example, Aquilegias and Gypsophila, which grow 2 feet high, may be planted 12 inches apart, while Delphinium formosum and Japanese Iris, which grow 3 feet high, should be 18 inches apart. Care should also be taken to blend the colors throughout the garden, so as to prevent too many of one shade of color coming together, causing jarring contrasts. The season of flowering of the different types should also be taken into account, and the different plants as evenly dispersed as possible in order to maintain an equality of flowering plants, leaving no portion of the garden bare or flowerless, nor crowding together too many that bloom at the same time.

Care in Summer.—During the growing season careful attention should be given if best results are to be obtained. There is nothing so beneficial as frequent stirring up around the plants, and raking the ground into order again; it allows the air to move more freely through the surface of the soil, thereby encouraging growth and keeping the weeds in check. During hot, dry weather, or when it is not convenient to water, a mulch of any loose, light material will be found very beneficial in retaining the moisture and in keeping the soil from baking; short grass, the rakings of the lawn after cutting, is excellent material for this purpose. Early in summer many varieties will have made considerable growth, and the supporting of these should be taken up in time. It is hardly possible to stake and tie up a plant so that it will have the same graceful appearance as if grown naturally without their aid; still, supports should be inserted at all tall-growing sorts early in the season while the plants are small. In this way they will lend themselves more naturally to their support than if this work is accomplished after the plants have made considerable growth. Once the plants get broken down or allowed to get "set" it is impossible to tie them up into natural shape again. This phase of summer work in the garden is often considered a matter of small importance, yet the difference between doing same in a slipshod and a workman-like manner is most apparent; and, while fully sympathizing with those who may not be able to

spare the time or who may not have the materials at hand necessary to perform this work in the best possible manner, it cannot be too strongly emphasized that these are two of the most important factors in the successful cultivation of all out-of-door plants. The removal of old flower stems will also materially help the appearance of the plants at all times, many species responding to this treatment with an extra crop of flowers later in the season. All decayed foliage should also be removed, so as to keep the garden neat and tidy at all seasons.

Winter Care.—About the middle of November or later, when all the soft growth has been killed by the frost and the plants are thoroughly ripened, the old hard-wooded stems should be removed and burnt up. It will then be found beneficial to cover the plants with a top dressing of loose stable litter, or, if this is not to be had, a covering of leaves—Nature's protection. This covering is best applied when the ground is in a dry condition, and should not be overdone, two or three inches spread over loosely being all that is required. A deeper covering would incite the plants into premature growth in the early spring, with a liability of damage by late frosts; don't be in a hurry to cover the plants; a little frost will do them good. As the extreme cold weather begins to disappear this covering should be removed by degrees, allowing any young growths which the plants may have made to gradually harden off. This process usually occupies only a few days, after which the plants may be fully exposed to the sunshine, and the litter or covering which has protected them during the winter may be raked up and removed.

Replanting.—It is all nonsense to suppose that Hardy Perennials once planted require no attention for several years. The truth is, if we wish them to give entire satisfaction, we must each spring see that each variety is treated in the best manner to insure its fullest development during the next flowering season. Many ideas are advanced on the question of how often they ought to be divided and transplanted, but no positive rule can be applied. Some sorts will take two or three years or even longer to get established and develop their fullest beauty after being transplanted, and usually the longer they are allowed to grow without disturbance the better results will be accomplished, while others should be transplanted or reset each season.

Most hardy plants which flower during the spring or early summer months, such as Anthericum, Paeonies, Doronicum, Dielytras, etc., produce their new growth from the crown of close, compact roots, and are better if left undivided and undisturbed for several years, the only care necessary for these being a liberal covering with fresh soil or compost early in spring. The late summer and autumn blooming species are usually of a more vigorous growth. Such sorts as Helianthus, Rudbeckias, Asters, Boltonias, Physostegias, etc., on which the original crowns die out each season and many new side-growths are made, are far better if replanted each season, selecting from three to five of the strongest growths, which, after the ground has been redug and enriched, may be reset in the same position or replanted to another section of the garden. Treated in this manner, they will not only produce flowers of larger size and finer colors, but will keep the stronger and more rampant growing varieties from crowding out their equally interesting but less vigorous neighbors.

Many not thoroughly familiar with this class of plants have an idea that nothing but a large field-grown clump will give satisfactory returns the first season. This, as experience has taught us, is in most instances a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps." The majority of the stock offered in this catalogue is pot-grown. This does not mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the fall months, and such stock can be planted, even late in the spring, with practically no loss, which, in the case of clumps, is often quite serious. The following letter from the well-known and successful amateur, W. C. Egan, endorses our views on this matter.

GENTLEMEN—Your shipment of perennials arrived safely to-day in most excellent order. It certainly is a pleasure, as well as a profit, to receive plants from you. Your system of growing these in pots allows shipment without disturbing the roots, thus insuring uninterrupted growth and no loss in planting.

EGANDALE, ILL.

Respectfully yours,

W. C. EGAN.

COMPLETE LIST OF

Dreer's Old-Fashioned Hardy Plants

WE GIVE on pages 2 to 7 and 9 to 17 a complete list of the Hardy Plants we offer this season, together with the general color effect, average height in inches, time of blooming in the latitude of Philadelphia, whether suited for a sunny, shady or partial shady location and price. For full descriptions kindly refer to our Garden Book or general catalogue, a copy of which we will be pleased to send on application.

	Color.	Height Inches.	Time of Flowering.	Location.	Price. Each.	Doz.
<i>Acanthus</i> (Bear's Breech)						
<i>Mollis latifolius</i>	or. foliage	36	Aug-Sept	sunny	\$0.25	\$2.50

ts to fill the above beds see page 10

PRICE OF PLANTS REQUIRED TO PLANT BORDERS, PLANS OF WHICH ARE SHOWN ON THE PRECEDING PAGES

BORDER No. 1, illustrated on pages 8 and 9

Planned for both sides of a path 100 feet long.

For a sunny position requires	536 plants, which we will supply for	\$50.00
" " shady " "	539 " " " " " "	50.00

BORDER No. 2, illustrated on pages 8 and 9

An irregular screen 100 feet long against boundary lines, etc.

For a sunny position requires 465 plants, which we will supply for.....	\$40.00
" " shady " " 444 " " " " " "	40.00

BORDER No. 3, illustrated on pages 8 and 9

Of regular outline, 100 feet long by 6 feet wide.

For a sunny position requires	271 plants, which we will supply for.....	\$25.00
" " shady " "	295 " " " " " "	25.00

It is possible that some of our customers may wish to plant a hardy border, part of which is in the shade and part in the sun. In such cases the sections which are shady should be filled with plants recommended for such locations, and if customers, in ordering, will state which sections are in shade, we will send the proper plants for same. Unless otherwise specified we will fill all orders with the plants suitable for sunny borders.

The prices at which we offer the above stock are considerably below the regular rates, as in anticipation of a large demand for these collections we have prepared an extensive stock of the various varieties. We make no charge for packing, which will be done in the most scientific manner, nor for delivery to any express or transportation line in Philadelphia, but the cost for expressage must be paid by the purchaser.

With each order we will include a blue print of the border wanted, drawn to scale, and a carefully prepared planting-plan, which will enable the most inexperienced amateur to set the various plants in their proper positions.

In preparing your border, see that it is deeply dug and fertilized, as suggested in the cultural notes on page 1. Have your beds ready in advance of the receipt of the plants, so that they may be planted promptly on their arrival. After you have prepared your border in accordance with the instructions given on page 1 level the surface neatly with a rake, and then mark out the different sections. A cane is as convenient a tool for this purpose as can be used. Place the plants in position in their various sections. Then plant and cultivate as recommended in the cultural notes in the opening pages of this book.

DREER SPECIALTIES

The Hardy Perennial Plants offered in this book are but one of our many specialties.

We offer in our Garden Book or General Catalogue what is undoubtedly the most complete line of Seeds, Plants and Bulbs ever offered, including

VEGETABLE SEEDS in all the best varieties.

GRASS AND FIELD SEEDS of the finest qualities.

FLOWER SEEDS in immense variety, of which the following are of special interest:

Antirrhinum or Snapdragons, now so popular for bedding and cutting in both the Giant and Half-dwarf sorts.

Asters. Dreer's Famous American and Imported varieties.

Cardinal Climber. The finest of all annual climbers.

Nasturtiums, both tall and dwarf, plain, Ivy-leaved, Geranium-leaved and Variegated-leaved sorts.

Pansies from world renowned growers.

Petunias. Our unexcelled strain of single and double fringed.

Stocks. Of the highest quality obtainable.

Sweet Peas. The very best of both the Orchid-flowered and regular Standard kinds.

GARDEN AND GREENHOUSE PLANTS. A very extensive collection, embracing plants suitable for the Greenhouse or Conservatory, Window Garden, Room decoration and for planting out for summer blooming, including

Begonias. The finest strain of Tuberous-rooted sorts.

Cannas. The cream of the new and old varieties.

Dahlias. A re-selected list of the best of the various types. Those who are particularly interested should send for our Special Dahlia Catalogue, in which we offer and describe nearly 500 varieties.

Ferns. The finest collection in this country.

Gladiolus. A list made up of high-grade sorts only.

Palms. We have over 3 acres of greenhouse space devoted exclusively to Palms.

ROSES FOR THE GARDEN. We specialize in strong two-year-old plants that will give immediate results, and our list embraces many of the latest novelties, that can only be procured from us, as well as the finest standard sorts of all types.

HARDY SHRUBS. We are extensive growers of these, and our stock is all in strong, healthy, vigorous plants of proper age to transplant.

HARDY VINES AND CLIMBERS. We fill five pages of our Garden Book with our offerings of these plants.

SELECT SMALL FRUITS. We offer a short but very select list of Blackberries, Currants, Gooseberries, Grapes, Strawberries, etc.

WATER LILIES AND AQUATICS. We are the largest growers of these in this country, and our list of *Nelumbiums*, *Nymphaeas*, Aquarium Plants and miscellaneous aquatics is most complete.

The Celebrated Horikiri Iris Flower Garden, Tokio, Japan.

Yucca (Adam's Needle)						
<i>Filamentosa</i>	white	60-72	June-July	sunny	.25	2.50

DREER'S CELEBRATED LAWN GRASS SEEDS

OUR special brands of Lawn Grass Seed, offered below, are noted for their adaptability to various situations and soil conditions, and are now used in every section of the country. The lawns at the **Alaska-Yukon-Pacific Exposition**, held during the summer of 1909, were made with "Dreer Lawn Grass," and we were awarded a **Gold Medal** for same. Many other prizes have been awarded us for Grass Seeds, including a **Gold Medal** by the **Pan-American Exposition**, held at Buffalo, N. Y., in 1901; but what is most satisfactory to us is the fact that they always give satisfactory results to our customers wherever sown.

THE "DREER" LAWN GRASS.

This is by far the best mixture of grasses offered for the purpose of quickly producing a permanent lawn. It is prepared from our own formula, and is a careful blending of varieties adapted to producing the thick growth and velvety appearance so much sought after. Per qt., 30 cts., postpaid. By express or freight—Qt., 25 cts.; 4 qts., 75 cts.; peck, \$1.25; bus. (20 lbs.), \$5.00.

DREER'S SHADY PLACE GRASS.

Usually it is quite difficult to obtain a satisfactory growth of grass under trees and in shady places; for sowing in such places we recommend the use of this special mixture. It will quickly produce an abundant and even growth of beautiful green grass. Per qt., 30 cts., postpaid. By express or freight—Qt., 25 cts.; 4 qts., 75 cts.; peck, \$1.25; bus. (20 lbs.), \$5.00.

DREER'S SEASHORE LAWN GRASS.

A combination of hardy grasses and white clover adapted for seashore lawns. Failures and unsatisfactory conditions of most lawns at the seashore are largely due to the use of varieties totally unsuited to the conditions existing. We recommend this mixture as the best for sowing at the seashore. Per qt., 30 cts., postpaid. By express or freight—Qt., 25 cts.; 4 qts., 75 cts.; peck, \$1.25; bus. (20 lbs.), \$5.00.

DREER'S TERRACE GRASS.

Ordinary lawn grass will not hold the soil on terraces and embankments, which require a thick turf, composed of varieties which make strong roots to take hold of the soil and prevent washing by heavy rains. Our terrace grass is a combination of such grasses, and will fill the requirements by making a quick growth of grass, forming a close mat and presenting a fine appearance. Per qt., 30 cts., postpaid. By express or freight—Qt., 25 cts.; 4 qts., 75 cts.; peck, \$1.25; bus. (20 lbs.), \$5.00.

DREER'S "EVERGREEN" LAWN GRASS.

This special mixture produces beautiful and permanent lawns. It is made from our own formula, and composed of grasses which are adapted for the purpose of producing turf which retains its rich green color and velvety appearance throughout the entire summer and fall. Per qt., 25 cts., postpaid. By express or freight—Qt., 20 cts.; 4 qts., 65 cts.; peck, \$1.00; bus. (20 lbs.), \$4.00.

DREER'S "FAIRMOUNT" PARK LAWN GRASS.

This mixture is well suited for various soil conditions, giving good results even in small city grass plots, where the soil is generally stiff and heavy. Also valuable for renovating old worn-out lawns and reseeding bare places. Per qt., 20 cts., postpaid. By express or freight—Qt., 15 cts.; 4 qts., 55 cts.; peck, 90 cts.; bus. (20 lbs.), \$3.50.

DREER'S PUTTING GREEN MIXTURE.

A careful study of the requirements for making the most substantial turf for Putting Greens developed the mixture herewith offered by us for this purpose. It has given thorough satisfaction wherever used, and produces a thick, tough, beautiful green turf. Per qt., 35 cts., postpaid. By express or freight—Qt., 30 cts.; 4 qts., \$1.00; peck, \$1.75; bus. (25 lbs.), \$7.00.

DREER'S GOLF LINKS MIXTURE.

Made from our formula with the object of producing a turf which will stand rough usage. For Tennis Courts, Cricket Tables, Golf Links, Polo Grounds, or wherever a good sward is wanted, this seed will give perfect satisfaction. This brand is used by many leading Golf Clubs throughout the country. Per qt., 20 cts., postpaid. By express or freight—Qt., 15 cts.; 4 qts., 50 cts.; peck, 75 cts.; bus. (15 lbs.), \$3.00.
